Description

When pressing reconnect inside the Wii remote settings in the Wii home menu, the emulated controller gets disconnected like it should. This is also reported by Dolphin. When trying to reconnect using 1 & 2 Dolphin says the Wii remote is connected again but it doesn't connect to the emulated Wii.

About 1,5 minute later, the emulated Wii remote does connect to the emulated Wii.

Shutting down the emulated Wii seems to trigger something as the emulated Wii connects to the Wii remote. Though this worked only a few times. When Dolphin is connected to a remote but the Wii isn't, shutting down the Wii takes a lot longer.

This also with the latest dev build and with 5.0.

I'm using a DS4 on Windows 10.

I'm able to reproduce this bug with both KB+M and an Xbox controller. Takes 1m to reconnect for me, and I also get the same longer time to shutdown.

I'm on Win10, build 11622.
