#### Description

##### Game Name?

[Put Game Name here]

Judge Dredd: Dredd vs Death

##### Game ID? (right click the game in the game list, Properties, Info tab)

GJDX7D, GJDE5S, GJDY7D

##### MD5 Hash? (right click the game in the game list, Properties, Verify tab, Verify Integrity button)

4b78c00906e4b782c336810166663e9a

##### What's the problem? Describe what went wrong.

FMVs don't play by default. Remedy: Disable Immediately Present XFB Copies

"Movie" style super widescreen FMVs have purple bars instead of black bars. Remedy: Disable Store XFB Copies to Texture Only. Though I find it weird this is needed when the XFB copies aren't being modified and the video itself plays fine.

##### What steps will reproduce the problem?

In order to see the purple cutscenes, you have to get through the tutorial which is a pain because the controls are very awkward. Z + A makes someone give up, A then arrests if you get stuck.

##### Is the issue present in the latest development version? For future reference, please also write down the version number of the latest development version.

5.0-12280

##### Is the issue present in the latest stable version?

Yes, Dolphin 5.0

**If the issue isn't present in the latest stable version, which is the first broken version? (You can find the first broken version by bisecting. Windows users can use the tool**

<https://forums.dolphin-emu.org/Thread-green-notice-development-thread-unofficial-dolphin-bisection-tool-for-finding-broken-builds>

and anyone who is building Dolphin on their own can use git bisect.)

no

**If your issue is a graphical issue, please attach screenshots and record a three frame gif of the issue if possible.**

Screenshots showing what it is supposed to look like from either console or older builds of Dolphin will help too. For more information on how to use the fifoplayer, please check here: <https://wiki.dolphin-emu.org/index.php?title=FifoPlayer>

[Attach any fifologs if possible, write a description of fifologs and screenshots here to assist people unfamiliar with the game.]

I've provided screenshots of each setting and the results it gives.

**What are your PC specifications?** (CPU, GPU, Operating System, more)

Core i7-6700K, GeForce GTX 1070, Windows 10

**Is there anything else that can help developers narrow down the issue? (e.g. logs, screenshots, configuration files, savefiles, savestates)**

[Anything else here]
