

Emulator - Emulator Issues #12399

[Android] BT and USB Controllers no longer work

01/28/2021 11:00 PM - brand175

Status: New	% Done: 0%
Priority: Normal	
Assignee:	
Category:	
Target version:	
Operating system: Android	Relates to performance: No
Issue type: Bug	Easy: No
Milestone:	Relates to maintainability: No
Regression: No	Regression start:
Relates to usability: No	Fixed in:

Description

Game Name?

[Any]

Game ID? (right click the game in the game list, Properties, Info tab)

[Any]

MD5 Hash? (right click the game in the game list, Properties, Verify tab, Verify Integrity button)

[Null]

What's the problem? Describe what went wrong.

[Xbox One controller with USB input and bluetooth no longer functions in game. MFI Steelseries Nimbus controller does the same thing. Controllers still work on other unofficial builds of Dolphin. The menu button still works but not the inputs]

What steps will reproduce the problem?

[Reproduction steps here]

Is the issue present in the latest development version? For future reference, please also write down the version number of the latest development version.

[5.0-13590]

Is the issue present in the latest stable version?

[Yes/No and version number here]

If the issue isn't present in the latest stable version, which is the first broken version? (You can find the first broken version by bisecting. Windows users can use the tool <https://forums.dolphin-emu.org/Thread-green-notice-development-thread-unofficial-dolphin-bisection-tool-for-finding-broken-builds> and anyone who is building Dolphin on their own can use git bisect.)

[First broken version number here (if applicable)]

If your issue is a graphical issue, please attach screenshots and record a three frame fifolog of the issue if possible. Screenshots showing what it is supposed to look like from either console or older builds of Dolphin will help too. For more information on how to use the fifoplayer, please check here: <https://wiki.dolphin-emu.org/index.php?title=FifoPlayer>

[Attach any fifologs if possible, write a description of fifologs and screenshots here to assist people unfamiliar with the game.]

What are your PC specifications? (CPU, GPU, Operating System, more)

[Android 9, Asus ROG Phone 1]

Is there anything else that can help developers narrow down the issue? (e.g. logs, screenshots, configuration files, savefiles, savestates)

[Unk.]

When did they stop working? Knowing the exact version of Dolphin that the problem started in would help us a lot.

5.0-11516 was the version I had when controllers were working. I have no idea what exact build it stopped working since I use on-screen controls. I do remember using the 8bitdo bluetooth gamecube adapter in November so it shouldn't be that far behind
