Relates to usability: Yes	Fixed in:
Description	
It should be translatable via Transifex, but currently isn't even though Transifex supports that file format. We just need to import dolphin-emu.desktop as a new resource.	
There's a small issue with how "tx pull -a" downloads the translations: It creates a single .desktop file for each translation. I don't think there's a good way to make it download all translations into a single file, but https://www.redhat.com/archives/fedora-trans-list/2009-August/msg00040.html (very roughly) outlines how to merge multiple .desktop files together, which should work for us.	

History

#1 - 10/23/2014 04:00 PM - JMC4789

What's happening with this?

#2 - 10/23/2014 07:21 PM - NeoBrainX

It's still an issue and no one's working on it.

#3 - 02/21/2015 06:39 AM - JMC4789

- Milestone deleted (Current)

Removing the current label as it's not really a release blocking thing.
