Description

Lego Star Wars II has different Gecko codes for each chapter of each episode's completion, these being:

```
Story Unlocked
Free Play Unlocked
Story Complete
Free Play Complete
Gold Brick Complete
All Mini-Kits
Red Brick Complete
```

You can view them here:
http://www.geckocodes.org/index.php?c=GL7E64

Notice that the list is divided into sub-categories, so you know which chapter of which episode a particular code is for. The thing is, Dolphin doesn't take these sub-categories into account, so it ends up looking extremely confusing:

0IWai0x.png

What I would like to see is for these sub-categories to be taken into account in the form of Another thing I'd like to have is to actually be able to make your own sub-categories to make things more organized. Here's a crappy MS Paint mockup to show you what I mean:

Oh I'm an idiot and didn't read the full issue report :)

Looks plausible to me and a good feature to make things easier on users.

#3 - 05/19/2016 05:47 PM - Helios

- Status changed from New to Accepted

- Priority changed from Normal to Low

- Relates to usability changed from No to Yes

I like it. Dunno when/how this could happen, but I like it.

#4 - 05/19/2016 05:52 PM - Helios

The issue I see with this though is, how would Dolphin know what cheat belongs in what category? We could go by naming as the obvious solution, but names change all the time. And we would need to define a format, and who knows what the codes downloaded from WiiRD come down as.

#5 - 05/19/2016 06:08 PM - mimimi

No, the file format on geckocodes doesn't look like a problem:
http://www.geckocodes.org/txt.php?txt=GL7E64

For me it would be a problem how to do sections in the GUI. But i hope that isn't an issue for a GUI programmer.

#6 - 05/19/2016 06:11 PM - Helios

It's Wx so there will be tears regardless.
